

# ProShield®

AI. Contains 250g/litre glyphosate  
and 40g/litre diflufenican  
MAPP No. 16118 Not available in ROI

AREAS OF USE:  
✓ INDUSTRIAL  
✓ AMENITY

## Pre and post-emergent non-selective herbicide for the control of annual and perennial weeds.

ProShield contains two potent active ingredients to deliver fast and effective weed control.

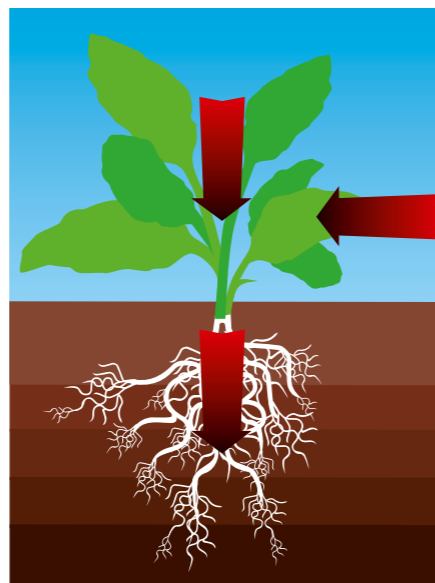

It contains glyphosate to control seedlings and established weeds and diflufenican (DFE) for pre-emergent prevention of further weed germination. These two active ingredients work together to deliver faster, more effective and more long-lasting weed control than a straight glyphosate application.

### ProShield BENEFITS

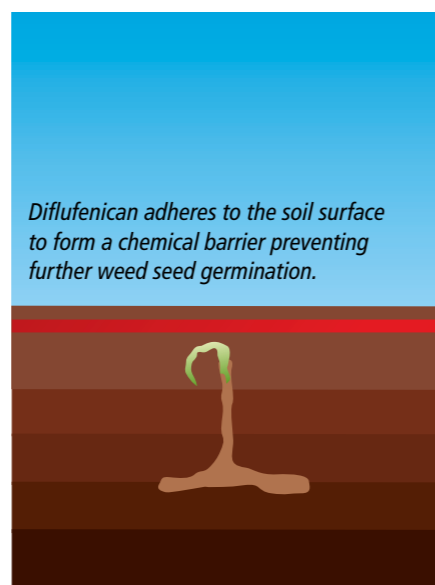

- Rapid kill then barrier prevention against germination for up to 6 months
- Rainfast within 1 hour
- For use on gravel and soft surfaces

### How it works

Glyphosate circulates throughout the entire plant causing rapid knockdown and kill of foliage and roots.

Diflufenican adheres to the soil surface to form a chemical barrier preventing further weed seed germination.

### Tree safety

ProShield can be used around mature street trees. It remains near the surface of the soil, and there is little or no lateral movement. ProShield does not, therefore, come into contact with the trees' roots.

### Operator safety

ProShield is classified as Non-Hazard and Non-Irritant to the operator under Chip 3 and COSHH regulations. It is a water-based, non-solvent formulation.

### Directions For Use

- For use on gravel and soft surfaces.
- One application kills weeds rapidly, then barrier action prevents germination for up to 6 months.
- Rainfast within 1 hour.
- The product is applied post-emergence to control a wide range of annual and perennial broad-leaved weeds and grasses on porous surfaces on land not intended to bear vegetation.
- Applications should not be made to plants growing under stress conditions, such as drought or water-logging, as reduced levels of control may result.
- Do not spray in windy weather.
- Do not add any wetting agent or adjuvant oil as this may result in reduced activity.
- FOR USE ONLY AS A HORTICULTURAL/INDUSTRIAL HERBICIDE.

### Application Rate:

Maximum individual dose:	4.5 litres per hectare 45ml per 100m <sup>2</sup>
Water volume:	200-400 litres per hectare 2-4 litres per 100m <sup>2</sup>
Maximum number of treatments:	1 per annum (at latest by end September)

### Product Characteristics

Pack size:	5 litre bottle
Packs per outer:	4 x 5 litre
Pack coverage:	1.1 hectare

### Recommended Period of Use

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
